

CUSTOM BUILDS

Atlas, shaped to your factory.

No two factories run the same. A Flowstate engineer builds what your operation needs into your own Atlas account. Fixed price. Written acceptance criteria. You watch it take shape.

From R3,000

PER CUSTOM BUILD

Builds factories ask for

A standalone app like these costs six figures from an agency. On Atlas you pay for the new slice only, because the platform underneath already exists.

Job Tracker

01

Where is order 4512? Nobody knows without a walk.

Scan jobs at every stage. See every order, its stage, and what is running late, live.

From R18,000

Downtime Logger

02

Machines stop and the reasons vanish.

Ten-second reason logging on a floor tablet. A ranked list of what stole your hours, in Rand.

From R8,000

Quality Catch

03

Scrap is a guess and repeat defects keep coming back.

Photo, code and cost every reject. See where defects are born and what they cost.

From R10,000

Planning Board

04

The plan lives in one person's head or a spreadsheet.

Drag-and-drop scheduling against real capacity, live on a floor screen.

From R25,000

Customer Report Robot

05

Someone retypes production data for a customer every day.

Their report, their format, sent automatically. Zero retyping, zero errors.

From R5,000

Owner's Scoreboard

06

You find out about a bad month when the accounts arrive.

Your five numbers on one page, on your phone, every Monday morning.

From R4,000

These are starting points, and smaller builds exist: a custom view, an export, a report on your existing data starts at R3,000. Every build is scoped to your factory, and if your need is not here, that is what the consultation is for.

How a build works

01

Consult

A free 30-minute call first. Then a structured 90-minute scoping session with an engineer. R1,500, credited in full toward your build.

02

Specify

Within five working days you get a Build Brief: what will be built, mock screens, a fixed price, a timeline, and written acceptance criteria. You approve and pay a 50% deposit.

03

Build

Built into your own Atlas account, behind a switch only you have. A progress note with a screenshot every week.

04

Review

After every sprint you drive the software yourself for 45 minutes. Every piece of feedback is logged and answered.

05

Refine

Two refinement rounds per milestone are included. A round is one consolidated list of changes, implemented and re-reviewed. Anything that fails the brief is fixed free, always.

06

Run

You accept against the checklist, pay the balance, and go live. We maintain it under Custom Care, R350 per month per module, for as long as you subscribe.

Straight answers

What does it cost?

Buils start at R3,000; most run between R5,000 and R45,000. Your exact price is fixed in the brief before work starts. No hourly billing, no surprises.

What if I do not like it?

You review it every sprint, so nothing appears at the end by surprise. Anything that fails the written criteria is fixed free. Defects are covered free for 30 days after go-live.

Who owns it?

Your data is yours, always, and exportable. The software is part of Atlas, which means it keeps working through every update and gets stronger over time.

What do I need?

An active Atlas subscription and about an hour of your time per week during a build.

Where do you work?

On site in Durban and Johannesburg. Video consultations and remote builds for the rest of South Africa.

GET STARTED

Start with a free conversation.

Send an enquiry and we will set up a free 30-minute call. We will tell you honestly whether you need a build, a setup, or nothing at all.
